

Automating Invoice Management for Non-Profit Impact

How Netsurit helped a non-profit organization save 180 work hours and approximately \$5,750 per month through an AI-enabled invoice automation solution.

Overview

This non-profit organization operates in the economic development sector, where operational discipline and careful resource management are essential to supporting its broader mission.

As invoice volumes grew, its supplier invoice process became increasingly manual — every invoice had to be captured and entered into the accounts payable system by hand. This absorbed valuable working hours and limited the team's ability to focus on higher-value work. The organization partnered with Netsurit to automate the process and unlock efficiency across its finance function.

The Challenge

High Monthly Cost

— manual invoice processing cost the organization more than \$5,000 every month, a significant expense for a non-profit budget.

180 Hours of Manual Work — every invoice had to be captured and entered by hand, consuming roughly 180 work hours per month.

Strained Internal Capacity — repetitive administrative work tied up skilled staff who could otherwise focus on higher-value, mission-driven initiatives.

No Scalable Process — as invoice volume increased, the organization lacked an accurate, scalable way to move data into its accounts payable system.

The Solution

Intelligent Invoice Capture

Netsurit built an automated workflow using Microsoft Power Automate, AI, and OCR to capture supplier invoice data directly from suppliers.

Automated Field Mapping & Transfer

Captured data is automatically mapped to the required fields and transferred directly into the accounts payable system, removing manual entry.

Built on Existing Microsoft Investment

The solution runs on tools already available through the client's Microsoft 365 subscription and Azure environment, requiring no new platform.

Practical, Not Complex

The approach focused on identifying and removing repetitive manual steps without rebuilding the organization's entire finance environment from scratch.

Results That Matter

180 hours saved per month — reduced time spent on manual invoice capture and data entry across the finance team.

Faster, more accurate processing — automated field mapping cut errors and sped up the path to accounts payable.

~\$5,750 saved monthly — cut the cost of manual invoice processing, freeing up budget for mission-critical work.

Team reallocated to higher-value work — staff previously tied to manual entry now focus on higher-impact work.
