SUPPORTING THE DREAMS OF THE DOERS

Every day, cloud computing is becoming exponentially more ubiquitous. Its popularity lies in the fact that not only does it provide limitless data storage and management capabilities, but it also helps in quickly and easily accessing data anytime, anywhere, over the internet.

HOWEVER, WHILE CLOUD COMPUTING COMES WITH NUMEROUS ADVANTAGES, WHEN THE QUESTION OF DATA ARISES, COMPANIES THAT USE IT CAN NEVER BE TOO SURE HOW SECURE IT IS, PARTICULARLY WHEN STORED IN A PUBLIC CLOUD.

At Netsurit, our **Secure Your Data** offer mitigates any threats by implementing effective and proven defensive measures to ensure your data is protected at all times and never finds its way into the wrong hands, or is seen by the wrong eyes.

IT'S TIME TO USE SECURE YOUR DATA AS A SERVICE WHEN YOU:

- ✓ Want improved security of data and services.
- ✓ Need to comply with governance requirements.
- ✓ Have purchased Office 365 and/or EMS and not consuming EMS services.
- ✓ Need to strengthen controls on who may access applications or data.
- ✓ Want to prevent accidental or intentional leakage of confidential business information.

YOUR DATA IS IN SAFE HANDS.

Our comprehensive solution uses the functionality in the Microsoft 365 Enterprise Mobility + Security Suite to protect against likely threats to data privacy or integrity. For your added convenience, this solution can be implemented over time in a series of progressive phases in order to achieve maximum protection while minimizing risk and disruption.

SUCCESS STORY:

Challenge:

A major South African Bank opted to implement Microsoft Office 365 for 40 000 plus users. They needed their people to be able to securely access services and data from any device or location, while obviating the consequent exponential security threats - whilst complying with regulatory requirements such as GDPR and POPI.

Solution:

The bank chose our team of experts to design and implement a comprehensive solution that included Enterprise Mobility + Security, including Conditional Access, Intune, Azure Information Protection, Multi-factor Authentication and other functionality to implement a virtually failsafe security operations solution.

Result:

The bank now enjoys the benefits of strict adherence to regulatory requirements such as GDPR and POPI. A Conditional Access Policy is now in place, based on device compliance policies - only compliant devices can access services and data. What's more, an additional verification method was implemented with Multi-factor authentication to ensure only the right users are accessing services and data.

THE NETSURIT DIFFERENCE.

At Netsurit, we live by the mantra “supporting the dreams of doers.” Why? Because we see IT as an enabler that almost every businessperson relies on to help them achieve their goals and aspirations.

And because data, sensitive information and intellectual property is so important to the success of our customers, we take its safety and protection very seriously indeed. We passionately support the idea that we are providers of an ecosystem that helps our partners, our customers and our own teams to realize and actualize their full potential.

At the end of the day, we believe it's the dreamers who will change our world. We're here to give them the tools to do it.
